

How to edit laserbeamFoam github pages website v2

If you have any questions: <https://chatgpt.com> :)

For MacOS

1. Ruby need to be installed on your machine

```
brew install ruby
```

(if you don't have brew you need to install it first)

2. Add Ruby to path

```
echo 'export PATH="/opt/homebrew/opt/ruby/bin:$PATH"' >> ~/.zprofile
```

```
source ~/.zprofile
```

3. Install bundler and jekyll

```
gem install bundler jekyll
```

4. Clone laserbeamfoam.github.io repo

```
git clone https://github.com/laserbeamfoam/laserbeamfoam.github.io
```

```
cd laserbeamfoam.github.io
```

5. Build

```
bundle install
```

```
bundle exec jekyll serve
```

May require a more tinkering based on your settings, for any trouble : <https://chatgpt.com>

Should see something like:

```
More info: https://sass-lang.com/d/color-functions

46 | background-color: darken($base-button-color, 1%);
    | ^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
    |
    | ..../..../just-the-docs-0.10.1/_sass/buttons.scss 46:23      @import
    | modules.scss 11:9                                           @import
    | /Users/cosicar/Desktop/laserbeamfoam.github.io/assets/css/just-the-docs-light.scss 6:9  root stylesh
    | eet
    | Deprecation Warning [color-functions]: darken() is deprecated. Suggestions:
    |
    | color.scale($color, $lightness: -3.0971659919%)
    | color.adjust($color, $lightness: -3%)
    |
    | More info: https://sass-lang.com/d/color-functions

52 | background-color: darken($base-button-color, 3%);
    | ^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
    |
    | ..../..../just-the-docs-0.10.1/_sass/buttons.scss 52:23      @import
    | modules.scss 11:9                                           @import
    | /Users/cosicar/Desktop/laserbeamfoam.github.io/assets/css/just-the-docs-light.scss 6:9  root stylesh
    | eet
    | Deprecation Warning [color-functions]: darken() is deprecated. Suggestions:
    |
    | color.scale($color, $lightness: -5.7954545455%)
    | color.adjust($color, $lightness: -5%)
    |
    | More info: https://sass-lang.com/d/color-functions

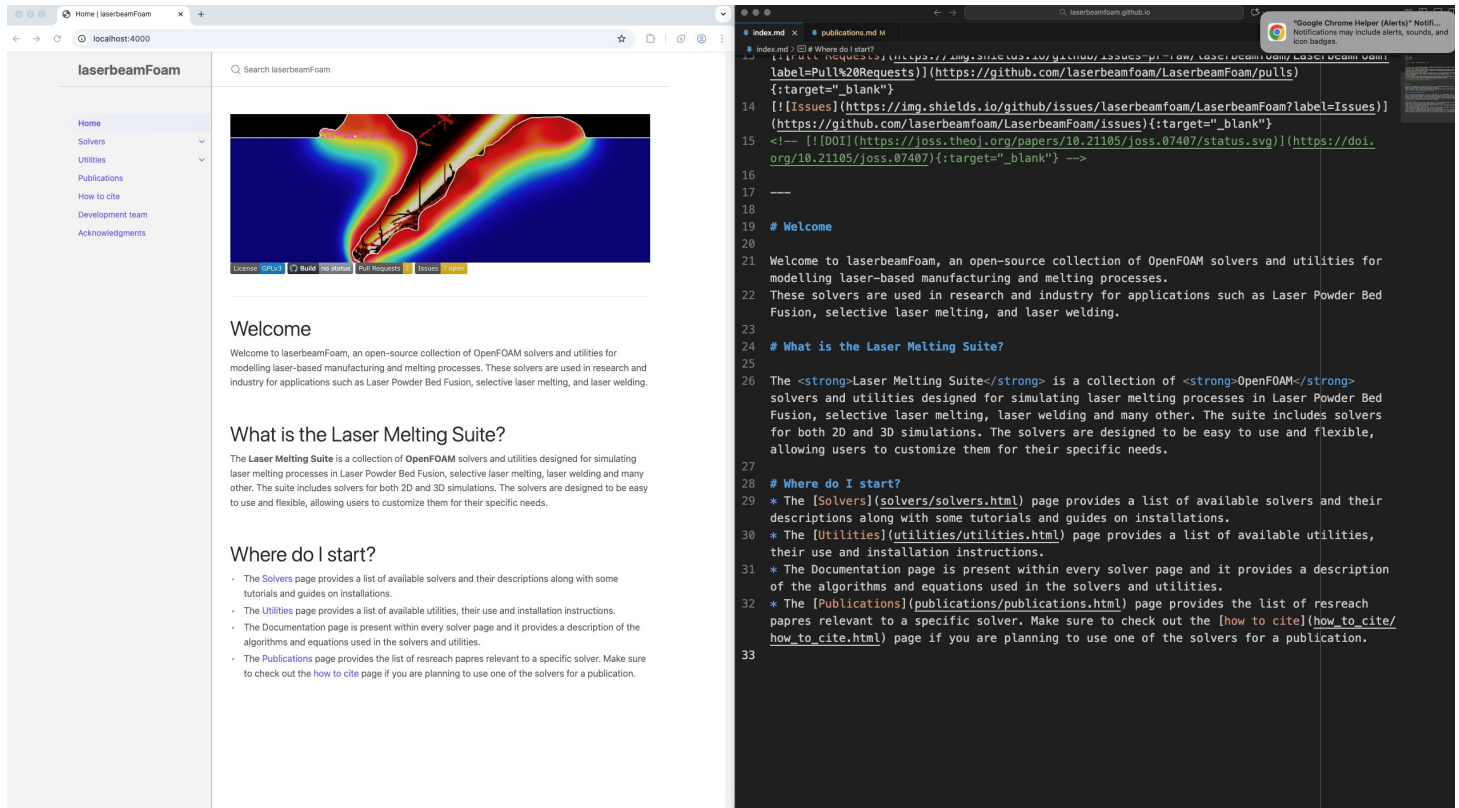

58 | background-color: darken(#dcdcdc, 5%);
    | ^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
    |
    | ..../..../just-the-docs-0.10.1/_sass/buttons.scss 58:23      @import
    | modules.scss 11:9                                           @import
    | /Users/cosicar/Desktop/laserbeamfoam.github.io/assets/css/just-the-docs-light.scss 6:9  root stylesh
    | eet
    | Warning: 85 repetitive deprecation warnings omitted.
    | Run in verbose mode to see all warnings.
    | done in 0.423 seconds.
    | Auto-regeneration: enabled for '/Users/cosicar/Desktop/laserbeamfoam.github.io'
    | Server address: http://127.0.0.1:4000
    | Server running... press ctrl-c to stop.
```

Open a browser and post this in it

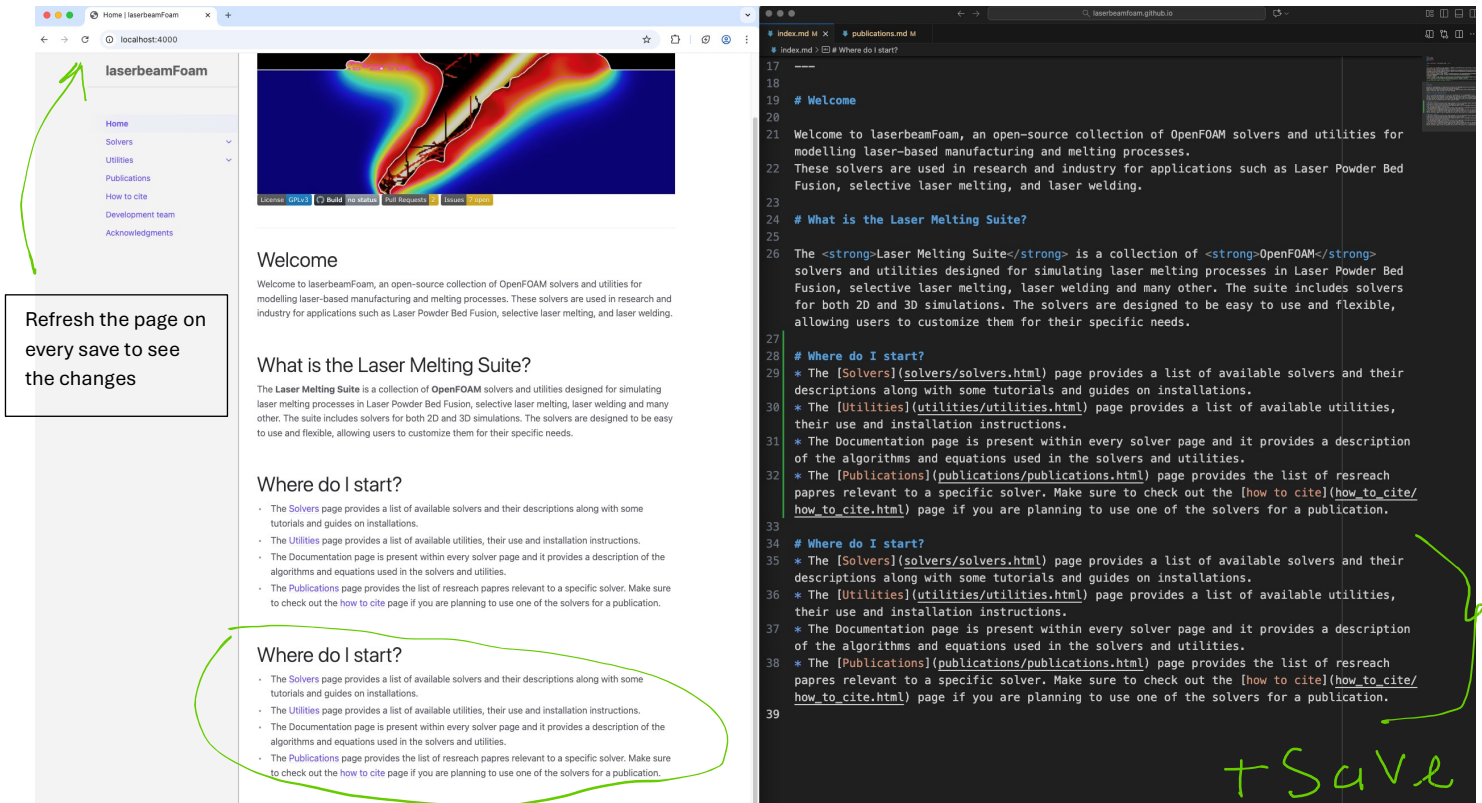

<http://localhost:4000>

or <http://127.0.0.1:4000/>

Should be able to see the website loaded

Now when you make any changes to the files in the laserbeamfoam.github.io folder it will automatically rebuild it and show it **on save**

Once you're happy with how it looks you can push it to the main branch and github pages will automatically build it
